

Zimbabwe Website Security Checklist

A practical, no-jargon checklist for any business website. Tick each item — anything left unchecked is worth fixing.

Transport & certificates

- Site loads over HTTPS with a valid, in-date SSL certificate
- HTTP automatically redirects to HTTPS
- HSTS header is set so browsers always use HTTPS

Security headers

- Content-Security-Policy is configured
- X-Frame-Options (or CSP frame-ancestors) prevents clickjacking
- X-Content-Type-Options is set to nosniff
- Referrer-Policy limits what is leaked to third parties

Software & access

- CMS, plugins, themes and server software are up to date
- Admin accounts use strong, unique passwords
- Two-factor authentication is enabled on the admin panel
- The password-reset flow uses expiring, single-use tokens

Data & compliance

- A privacy policy is published and linked from every page
- Contact / booking forms have spam protection
- Personal data is collected only where genuinely needed
- Backups are taken regularly and tested
